

REMARKS

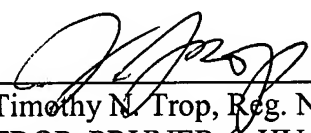

The independent claims have been amended to call for driving an electrode of a liquid crystal cell without using a voltage greater than 3.3 volts.

Former dependent claim 4, which called for using a voltage equal to or less than 3.3 volts, was rejected based on the Flynn application. However, Flynn merely talks about maintaining a voltage swing of less than a certain magnitude. Clearly, Flynn uses voltages greater than 3.3 volts. See, for example, paragraph 50, where he talks about using high and low voltages and paragraph 65, where he talks about using a voltage of 5.5 volts.

Therefore, reconsideration is respectfully requested in view of the claim amendments.

Respectfully submitted,

Date: September 11, 2007
